 Snow Award

Award Title	Description
The Snow Award in Epidemiological Studies	Epidemiologic studies include original scientific studies or reviews of the frequency, incidence, burden, and causality of prevalent or epidemic diseases or ailments and their determinants that threaten public's health and creators of evidence. These studies encompass a wide spectrum of substantive areas and protocol formats that may well go beyond the realm of biology to be in the social, urban or economic spheres.
The Nightingale Award in Solutions and Technologies	A variety of hard and soft solutions and technologies have been designed and developed by humans to deal with the population health problems. These solutions have a very wide range: from vaccines and antibiotics to anti-anopheles tents and digital health apps. Cheaper and higher impact solutions towards the population health issues are closer to this concept.
The Almaty Award in Advocacy and Leadership	The public health institution is a multi-disciplinary enterprise. Delivering public health goals depends to a large extent on the participation of non-health sectors: transport, education, housing and habitat, natural environment and workplace. Garnering cooperation and movement of other sectors to prioritize the health of the population requires leadership, publicity and advocacy, and passion for the health of the population and social justice
The Shadpour and Pileroudi Award in Systems and Reforms	Management systems, operating procedures, and small to large structural designs support and implement health objectives and attain population health in its diverse substantive areas.
The Adelaide Award in Urban and Public Policy	The public health institution is a multi-disciplinary enterprise. Delivering public health goals depends to a large extent on the participation of non-health sectors: transport, education, housing and habitat, natural environment and workplace. A wide range of civil measures, public policy and urban and municipal designs by non-health public organization or agencies or non-governmental organizations and the private sector have a wide and deep impact on population health
The Gates Award in Philanthropic Giving and Service	Philanthropic initiatives, donations and endowments and exemplary service by individuals, non-governmental organizations, civil society and the corporate sector towards the population health constitute a major social process towards addressing, improving and promoting the health of the population.
